PROFESSIONAL SUMMARY

Computer Science Engineering (Data Science) student and aspiring Software Engineer with good knowledge in Java, Fundamentals in Python, Machine Learning and SQL, gained through internships and end-to-end software development projects. Proficient in building full-stack, scalable, reusable, and reliable software solutions using Flask, Scikit-learn, and TensorFlow, with strong analytical thinking, logical reasoning, and problem-solving abilities. Skilled in Git version control, and cross-functional teamwork, with proven ability to build features and modules from scratch, maintain existing systems, and contribute to scalable SaaS product development. Mentor's junior members in the SOCH community on technical and project skills.

EDUCATION

B. Tech in Computer Science Engineering (Data Science)

2023 - 2027

Rajeev Gandhi Memorial College of Engineering & Technology, Nandyal, India | CGPA: 8.74 / 10

INTERNSHIP EXPERIENCE

Data Visualization Intern — Infosys Springboard 7.0 (Remote)

Jul 2026 - Sep 2026

- Worked on data visualization and analytics tasks using Power BI and Tableau, translating raw data into actionable dashboards and reports.

PROJECTS

Eco Monitor — Air Quality Monitoring System

Dec 2025 - Feb 2026

- Built a full-stack software application from scratch using Flask (Python) for the backend, integrating TensorFlow and Scikit-learn models to classify pollution levels from images and predict AQI from pollutant data (CO, NO₂, SO₂, O₃, PM2.5, PM10).
- Designed and implemented a SQLite database layer for reliable data storage and retrieval, following clean, reusable module design.
- Applied LIME for explainable AI, improving model interpretability and transparency for end users.

Driver Aggressive Behavior Detection

Sep 2025 - Nov 2025

- Developed a Random Forest machine learning model in Python to classify driver behavior into Safe, Moderate, and Aggressive categories using acceleration, braking, and speed pattern data.
- Implemented data preprocessing, feature engineering, and model training pipelines using Pandas, NumPy, and Scikit-learn, focusing on code reusability and maintainability.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, SQL, HTML, CSS, Fundamentals of Salesforce

Core Concepts: Fundamental Knowledge about Software Development Life Cycle (SDLC), Debugging

Machine Learning: Machine Learning, Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib, Seaborn, Plotly

Backend & Database: Flask, MySQL, SQLite, Software Development

Tools & Platforms: Git, GitHub, Version Control, Agile, Streamlit, Jupyter Notebook, VS Code, Google Colab, Power BI, Tableau

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Salesforce Agentforce Specialist
- ServiceNow CMDB and CSDM Certification

ACHIEVEMENTS

- 1st Prize — Inter-College SQL Hackathon
- 1st Prize — 24-Hour Hackathon, JNTU Anantapur
- Selected for Smart India Hackathon (2nd place at college level)
- Poster Presentation Winner (2×)
